

In 2019 Ed Hawkins created the famous **#ShowYourStripes** visualization to raise awareness about climate change. Each stripe represents the **temperature** averaged over a year. He conducted his analysis for **countries**.

For virtually every country, the stripes turn from mainly blue to mainly red in more recent years, illustrating the rise in average temperatures in each country. We repeated his analysis on a high-resolution, weather station level in Hungary and Romania – and found that every single station followed the warming trend.
